

# HOW SOLAR ENERGY SAVES YOU MONEY

Solar panels offer greener way to power your home. Many Americans today are turning to solar to help eliminate reliance on fossil fuels and start generating electricity with the power of the sun. The wonderful thing about having your own solar power system is that you're not only **helping the environment**, you're **saving money too**.

## SAVINGS ON YOUR ELECTRICITY BILL

Your home uses the energy that comes from your solar panels to reduce the energy you take from the utility grid. Once you start generating your own power, you will start saving money. With a purchase, you can even eliminate your electric bill.

## TAX CREDITS, REBATES AND INCENTIVES

Tax credits, rebates and incentives are given to encourage homeowners to use renewable energy. In sunny California, solar power users receive a lot of rebates and other incentives.

## LOW ELECTRICITY RATE FOR YEARS

Energy rates usually go up each year. With your own solar power system, you can lock-in low and fixed electricity rates for 20 years. That means you never have to worry about fluctuating electricity rates and other unfavorable surprises. Your savings will only grow year by year!

## INCREASED HOME EQUITY

Not only will you save on monthly utility bills, the value of your home will increase because you own your energy. If you decide to sell, the new buyers will be able to save energy without the hassle of installation.

## OWN YOUR POWER FOR FREE

It used to be prohibitively expensive to get solar for your home. With easy, **\$0 down financing**; SolarMax makes owning energy for your home or business simple.
